

SDA Project Rubric

Members Name: _____ Total Marks: /140

Roll No: 1-_____, 2-_____, 3-_____

Evaluation Criteria

Sr #	Criteria	Marks	Grade Yourself
1	Documentation Detailed documentation, following given template. All document sections are complete with readable images of models & Readme File.	10	
2	Use Cases All use cases assigned to group members are proper functional and completed.	18	
3	User Interface Fully functional user interface created using JavaFX. All screens and events are working correctly. Complete mapping to SD's, SSD/Expanded use case.	10	
4	OOP principles in Business Logic Well encapsulated classes. Program takes full advantage of inheritance, abstraction and polymorphism where appropriate to effectively meet its responsibilities.	10	
5	Business Logic Layer Functionality Program is logically well designed, displays correct output, executes correctly with no syntax or runtime errors.	10	
6	Database Tables named correctly. Exception Handling. Data properly read, written, updated and deleted in tables. Input validation for all values taken from the user.	10	
7	Architecture - Choosing an architectural style well-suited for your project. - All 3 diagrams (Package, Deployment, Component) designed correctly, adhering to the architectural style and implementation.	5 + 15	
8	Integration b/w UI, BL and DB All 3 layers (UI, BL & DB) implemented as separate packages/layers. All layers fully integrated and functioning correctly.	12	
9	Consistency b/w design and code 100% mapping of design to code, All SD's must properly map into your code.	10	
10	Design Patterns (GRASP & GoF) Controller, Information Expert, Creator, Low Coupling, High Cohesion and Protected Variation ALL applied correctly. GoF applied where applicable.	10	
11	Non-functional requirements At least 2 non-functional requirements are implemented correctly.	10	
12	Code - Fully functional code - Commented and indented code.	5+5
